Keywords: Western markets, socialism, deepening

Abstract: In the process of the development of Western market socialism, the 1980s entered the heyday of theoretical development, and at the same time it continued to fall into a downturn in the 1990s. In the 21st century, Western market socialism also ushered in a new development situation. Therefore, in the article The research and discussion will discuss in detail the deepening development of Western market socialism, and conduct in-depth research and reflection on the basic propositions of Western market socialism.

1. Introduction

Market socialism was put forward by Polish economists in the 1930s. After years of development and practice, the discussion and analysis of market socialism has been continuously deepened. Since the drastic changes in Eastern Europe in the 1990s, market socialism has been in Europe. The region is showing a state of rapid development, and this has caused relevant experts and scholars in the western region to gradually begin to think about the nature of western market socialism. So far, Western market socialism theories have been enriched, and in the process of continuous development, a full set of theories exploring the combination of socialism and market economy has gradually formed, that is, to play the role of the market without changing the nature of public ownership of socialism. The integration of socialism and the market economy to promote the vigorous development of the market economy has formed a completely different style from the socialist market economy with Chinese characteristics in my country. However, under this premise, Western market socialism is also very important for the economy. Development has formed a historic and creative contribution. Therefore, careful analysis and discussion of the internal relations between market socialism and socialist economy can play a positive role in promoting the perfection of market socialist economy. Therefore, in the analysis of the article, we will carefully discuss and study the deepening of Western market socialism. Morphological Characteristics of Western Market Socialism

2. Discussion on the Theoretical Features of Western Market Socialism

Regarding the development of Western market socialism, we can see the basic development process of market socialism, and at the same time, we can summarize the theoretical content and characteristics of the development of market socialism at each stage ^[1]. In summary, the development of socialism in the Western market has gone through three important periods. At the same time, in each period, there are also outstanding scholars in the industry who advocate the construction and demonstration of different theoretical models, and then form a clearer thinking of Western market socialism. The theoretical form fully demonstrates the unique characteristics of Western market socialism:

The first period was from the 1920s to the 1930s: it was mainly the exploration and design of the planned simulated market. In this set of theories, the possibility of the integration of socialism and the market economy was systematically demonstrated, and this theory The emergence of also fully marked the birth of Western market socialism theory.

The second period was from the late 1940s to the 1980s: at this stage, it was mainly the theory of market socialism generated by the Eastern European market, which had relatively distinctive

characteristics and tried various reforms against the highly centralized planned economic system. Theories, and these theories played a positive role in the exploration and development of the market economy under the conditions of the Western market economy at that time, and at the same time provided a theoretical basis for practice and development for the reform and innovation of market socialism in Eastern Europe. The dual mechanism of the planned market has gradually formed, which has laid the foundation for the development of socialism in the western market ^[2].

The third period is from the end of the 1980s to the present. Due to the dramatic changes in Eastern Europe in the West, the theory of the Western socialist model emerged. Its main feature is to explore a new model of socialism that replaces capitalism and gradually form a new market society. At the same time, market socialism has gradually become a hot spot in the research of western social and economic development.

3. Basic Propositions of Western Market Socialism

In the Western market socialism, some basic issues of socialism have been explained and demonstrated, and this has gradually formed a new theoretical form and viewpoint of Western market socialism.

First, in Western market socialism, it is fully affirmed that socialism can be integrated with market economy, and at the same time public ownership and market economy can be compatible with each other, and this has gradually formed a unique theory of Western market socialism. In the process of development, it emphasizes fairness, democracy, and equality in the development model. At the same time, it also proposes that socialism cannot be combined with the planned economy alone. At the same time, the vigorous development of the market economy does not hinder the realization of the goal of socialism. Western scholars also believe that there is no equal sign between market economy and capitalism.

Secondly, the brand-new market economy development model studied by Western market socialism is based on the premise that the public-owned economy dominates the market development, and many scholars have also made new discussions and proofs on the development of the Western market socialist economy. , Put forward a brand-new viewpoint and new development goal, which has vital theoretical value ^[3].

In short, Western market socialism scholars have also made comprehensive and in-depth exploration and research on a series of core value elements and goals of socialism. From the perspective of the public economy, the goal of Western market socialism cannot be based on the use of the market as a method. Automatic realization requires public ownership of the economy as a guarantee for the development of market socialism, and the actual realization of market fairness, justice and democracy through public ownership. Regarding the issues of freedom and democracy, Western market socialism also emphasizes the full realization of corporate democracy, economic democracy, and national democracy under the premise of social development entering marketization. This is also a prerequisite and important for realizing the socialization of Western markets. Guaranteed. ^[4]

4. Deepening Thinking on Western Market Socialism

In the development stage of Western market socialism, it focuses on the goal of replacing capitalism and realizing market socialism, and has conducted a series of explorations and studies on market socialism, and most of the research experts and scholars are feasible to realize Western market socialism. It has been fully demonstrated to provide solid theoretical support for the deepening and development of Western market socialism ^[5]. And this also determines the inevitable connection between the development of Western market socialism and the Western economy, that is, gradually constructing a new market economic development system guided by Western market socialism. In the above process of exploration, it is important to the development of Western market socialism. And innovation has also formed a benign promotion effect.

First, in the stage of exploration and demonstration of Western market socialism, it clarified that

market socialism and market economy can achieve effective integration, and in the process of theoretical research, it also explained the possibility and necessity of real integration between the two. He criticized traditional socialism and democratic socialism theories, and strongly opposed neoliberal theories that sought to surpass the real capitalist countries.

Secondly, Western market socialism also fully affirmed and demonstrated that the market economy can be integrated and developed with the socialist system, and gradually formed a new form of market economy thinking, which has made a profound understanding of the core elements and target values of Western market socialism. The research and exploration, which to a certain extent promoted the deepening development of Western socialism .

Thirdly, Western market socialism also has a certain reformist nature, which is more similar to a "utopian" design model, which not only summarizes the experience and lessons of traditional socialist theory and practice, but also focuses on the current market economic development in Western society Model, put forward a new theory of the development of advanced capitalism and democratic socialism, and formed a new pattern of the deepening development of Western socialism .

In short, the rapid development of Western market socialism and the continuous deepening of theoretical research in it have also created certain challenges for Western capitalism, and the vigorous development of Western market socialism can, to a certain extent, promote the gradual formation of a new society in the West. The economic structure can also have a certain effect on the development and innovation of the western market socialist economy, and also accelerate the deepening of the development of western market socialism.

5. Conclusion

To sum up, the new arguments and theories of Western market socialism have gradually formed a new market economy development pattern through continuous attempts and innovations. The exploration of Western market socialism is also compatible between the public economy and the market economy. Provides a more far-reaching theoretical reference. Therefore, in the development of socialism in the Western market, it is necessary to fully focus on the future and comprehensively improve the development level and efficiency of the market economy from a new perspective, and to actively explore and practice Western markets in Western regions. Socialism, and planning short-term and long-term market economic development goals, to make every effort to promote the continuous renewal and improvement of the socialist economic development of the Western market.
