Keywords: young Marxists; colleges and universities; path

Abstract: According to the current state of development in the country, the training of young Marxists in colleges has gradually become a strategic project, which is also related to the process of my country's socialist modernization, and its practical significance is for Marxism. The development of the country has the effect of advancing. Although all colleges and universities have been promoting this activity in recent years, significant effects have also been obtained in this activity. However, in the face of the advent of a new era, some problems will still emerge. Therefore, further strengthening and improvement work is needed while continuing to promote this activity. Persist in the use of Marxist scientific theories to guide the growth of young people, combine the actual development needs of the current youth subject, and focus on cultivating the critical spirit of college youth, so as to create a new era of Marxist practitioners and qualified socialist successors in China.

1. Introduction

Young people have always represented hope of the motherland and the people. Colleges and universities have always played an important role in cultivating qualified successors for the country. In the work of cultivating young Marxists, they have harvested very good results and made great contributions to the construction of the motherland and the maintenance of social stability. contribute. In the face of the advent of the new era, this work still needs to be improved and improved. The emergence of these problems restricts the training process of young people to a certain extent. This article analyzes based on this status quo.

2. Innovate and reform the current training methods of young Marxists

2.1 Pay attention to diversification and hierarchy when selecting and training

The first point is that when selecting training objects, we must combine the needs of the current era and keep up with the pace of the times. Give full and reasonable consideration to students' daily performance and group characteristics. The target of training can be the backbone candidates of the student union, but also consider other backbones. They can be backbone entrepreneurs of clubs or students with outstanding achievements in other areas. The process of talent selection must have a clear goal, the operation must also conform to the corresponding norms, it must not be too restrictive, and the form must be carried out in a variety of ways. The second point is that the training program and later implementation process can be varied. The cognitive abilities and personalities of college students are different. If a single training method is adopted, it will not be able to meet the various needs of students. At the same time, they must be divided into different groups based on the characteristics of the students and past experience, and be refined , Establish different types of talent pools to facilitate comprehensive training and management. According to the differences between groups and the characteristics of each group, a personalized training program is carried out to make the training work more pertinent. The third point is to establish a trapezoidal structure, and then cultivate in a progressive manner. Progressive training requires the gradual formation of diversified talent training programs and the training of echelons. Progressive training requires the gradual formation of training echelons in the training program of diversified talents. The training process is divided into multiple stages, and different training programs are made for each stage and the steps to be implemented in the future. At the same time, corresponding

supporting standards must be established so that students can truly feel their progress.

2.2 Expand the way of practical education

Practice is the process of testing and improving the acquisition, application, and improvement of knowledge. It is also an effective way to train and improve talents. Prominent training in all links and related content involved in practical education is particularly important for the training of young Marxism. First, you can organize students to go to the countryside to get a real understanding of the situation in the countryside, and you can also directly gain experience, so that you can have a deeper understanding of theoretical knowledge and strengthen your beliefs. Second, you can practice according to the major you are learning, which can provide students with the opportunity to study and practice in the factory, and improve the students' professional skills. It is also possible to organize voluntary activities for college students, so that students can use their professional knowledge or professional skills to serve the society. Third, encourage students to understand and conduct in-depth research on some current affairs hotspots. In conducting research activities, it is necessary to ask questions about the background and reasons of this incident. At the same time, after asking questions, it is necessary to conduct in-depth research on the results obtained, the changes that occurred before and after the question, the solutions and the shortcomings. And analysis has enabled students to deepen their understanding of facing social problems. Fourth, in the face of major decisions or hot issues in society, it is necessary to create opportunities for students to preach such issues within a certain range. In doing so, on the one hand, students will deepen their grasp of the problem in the preparation process of the preaching, so that the students' abilities in all aspects can be improved and tempered; on the other hand, through communication with the masses, this communication process will also It will deepen students' understanding of the problem.

2.3 Implement the combination of online and offline to build a new work system

In the modern information society, when cultivating young Marxists, we must pay attention to the role of the Internet. When carrying out training work, we must fully understand some of the challenges arising from the advent of the network age, and at the same time use the resources provided by the network platform reasonably to create conditions for the training of college students and strengthen its construction in the network position. Build a corresponding training system through online and offline interaction. At the same time, it can also use the advantages of the network to rationally integrate resources inside and outside the school, and build a bridge for communication between enterprises and schools, between teachers and students, and between students and students. Communication software can also be used for construction to increase communication, break through the limitations of space, guide students, and enable students to learn self-education. The convenience provided by the network is realized, teachers and students can communicate in a timely manner, and teachers can also provide timely guidance. Generally speaking, it is necessary to have a reasonable and full understanding of the challenges and opportunities brought about by the development of the Internet, actively face the challenges, and at the same time seize the opportunity to strengthen the training of students.

2.4 Make full use of the school's characteristic education

The training carried out by colleges and universities is a systematic project, which is related to all aspects of the school. Therefore, in order to carry out various tasks, it is necessary to set up special committees under the unified leadership of the school party committee to enable various departments to cooperate with each other , Further forming a system. School leaders and teachers should also be deeply aware that teaching and educating people is not just about imparting knowledge to students, but focusing on the ability of students to establish the correct three views, so that many college students have a firm belief that they have noble morals and solid knowledge. Qualified talents whose overall quality is too high is an important responsibility of the school. Pay attention to the training work, so that the leaders are extremely concerned. It is necessary to establish a solid and firm system of educating people for all employees, and let all personnel carry out management work together, so as to promote the process of this work in an all-round way. In

this process, we must pay attention to the social public opinion atmosphere and the function of campus culture to educate people. Make it fully functional. Every university has its own unique culture and its role in educating people in spirit, and it must be truly brought into play. Attention should be paid to the construction of campus culture, as well as to the education function of campus culture, so that it can be fully utilized and create a good training environment for college students, which is to cultivate education in all corners of the campus.

3. Guided by Marxist theory

3.1 Reasonable use of the latest achievements of the Sinicization of Marxism

By rationally combining China's actual national conditions with Marxism, a unique revolutionary and construction road suitable for China's actual conditions can be found. The theoretical system of socialism with Chinese characteristics is the latest result of the Sinicization of Marxism. Its proposal is an inevitability of China's development and is of great significance to the advancement of the cause of socialism with Chinese social characteristics.

3.2 Follow the laws of Marxist theoretical education

"Marxist theory education is the inherent requirement of Marxist theory itself, and it is the cause of socialism. Practical needs for continuous growth and innovation "[1]. Theoretical education for college students is an important part. In the process of training, it is necessary to fully understand and follow the educational laws of Marxist theory. Political lessons are used as the main transportation channel to carry out ideological and theoretical education to students. Indoctrination, indoctrination should be carried out comprehensively and systematically to make this kind of education more meaningful. In this process, college students can have a systematic grasp of the system, understand and apply it in practice. At the same time, when conducting education, Pay attention to teaching in accordance with the development laws of college students and their learning characteristics. Teachers should also pay attention to their role of guidance and guidance in the education process. Teachers should actively cultivate young people in theory, and use carriers and theoretical knowledge to help college students Answer targeted questions. Teachers should pay attention to their words and deeds when working with students, and pay attention to the changes in students' thoughts in time. Teachers should provide healthy guidance to students so that they can continue to grow and make progress.

3.3 Pay attention to advancing with the times when cultivating

The essence of Sinicized Marxism is to emancipate the mind and adhere to the principle of seeking truth from facts[2] . In recent years, with the further development of society, the problems encountered in the training process continue to appear. The traditional model can no longer meet the development requirements of the new era, and timely adjustments and changes are needed. It is also difficult to make training. The requirements of the work can be achieved, and the training goals are difficult to achieve, and no satisfactory actual results can be obtained.

It is more difficult to achieve the training goals and achieve satisfactory results. The process of cultivating young Marxists is a process of continuous development and is adapted to the characteristics of the development of this era. The work of cultivating young Marxists must be constantly innovated and must be adapted to the development needs of the times.

3.4 Pay attention to the all-round development of college students in the training process

Colleges and universities not only impart knowledge to students, but also promote the overall development of students, and also cultivate qualified builders and successors for the motherland. This is also an inevitable requirement of our country's current development[3].It is still the inevitable requirement of Marxism on people, which fully reflects the educational nature of Marxism. When training, it is necessary to carefully select the teaching objects, not only instill in theory, but also take students as the center, and pay attention to the overall development and healthy growth of students. Combining the growth characteristics and characteristics of college students in

the selection of training objects, it is necessary to break through the secular concept of selection, and pay attention to considering that college students can actually develop diversified. It is necessary to carefully analyze the differences between college students and train them separately based on the results of these analyses. Always pay attention to the actual needs of college students in order to promote their all-round development, so as to be truly student-centered. It is necessary to choose practical and effective training methods, avoid some training methods that have no real meaning, pay attention to selecting methods that can trigger college students to think, and help students improve their ability to solve practical problems.

4. Adhere to the principles of training with Sinicization

4.1 Combination of focus and general

The first point is to determine the key training targets. In colleges and universities, the target of training is generally the relatively outstanding students among young students, which may be student leaders, students, party members, or other students with outstanding achievements. Cultivating such students has gradually become the focus of this work. The second point is to set an example, so that outstanding students can act as role models and role models, set an example for other students, determine their development direction, and use the positive energy of these outstanding students to influence other students. Third, the college students at this time are in the growth stage and have their unique group characteristics. These characteristics include their pursuit of progress in learning and other aspects, and their self-esteem is relatively strong. In the course of this series of processes, more college students will be encouraged to be strict with themselves, pursue progress, and eventually become a member of the backbone group. The whole process of focusing on such students will also attract more students. Outstanding students from all participated to make this work more effective.

4.2 Combination of theory and practice

Theory and practice are mutually infiltrated and combined, and practice is also the only criterion for testing truth. Therefore, the theoretical study must be standardized, conducted frequently, and have a corresponding system. This is also the more important place and foundation for cultivating young Marxism. When training, you can't just study in theory, but also pay attention to the connection with reality. The first point is to focus on integration when imparting theoretical knowledge. The first is to combine history, the second is social changes, and the third is to provide guidance on theoretical knowledge based on actual examples. The second point is to guide students to participate in social practice and actually enter the society. Students can be organized to participate in social practice activities during student holidays or social practice classes to further enter the actual society. Let students see our country's achievements in various fields in practical activities. The third point is to inspire students to experience the theoretical knowledge they have learned in practice, and use the problems encountered in practice as a test of theoretical knowledge.

4.3 Combination of education guidance and self-education

In the process of training, we must insist on guiding students to be the new generation of builders and successors as the primary task of the work. Not only must we use our existing theoretical system to educate the backbone of students, but also earnestly understand the current situation. The real needs of college students, according to the real growth needs of the backbone of the students, carry out targeted training work[4]. Combining education goals with the overall development of students, based on this, enable college students' self-education to be effectively brought into play, and at the same time as education and guidance, students should achieve strict self-discipline and self-improvement. A deep understanding of the relationship between the two can cultivate qualified young Marxists. At the same time, it can also improve the overall quality of the backbone of college students and achieve their all-round development.

5. Conclusion

The training of young Marxists in colleges and universities is a relatively arduous and significant project, and it is also an extremely glorious task. The school helps students establish the correct three views and strengthen their ideals and beliefs, and cultivate a group of qualified successors for the motherland. Marxism guides the thinking of young people in real life and study, and at the same time cultivates a group of ideals and beliefs. Young Marxists fighting for the great rejuvenation of the Chinese nation. Let Marxism continue to lead the thinking of young people in the changing times, and educate batches of young Marxists who are firm in their ideals and beliefs, stand firm on the people's standpoint, cultivate strong skills, and actively participate in the great rejuvenation of the Chinese nation.
