Abstract: For teaching, learning teaching is a very important part of teaching, because effective learning teaching can improve students' learning ability, help them expand their learning surface and improve their literary literacy. But to achieve this goal is not easy, because half of the students are not interested in learning, and only limited classroom teaching time can not play a good effect. Therefore, in view of this situation, parents and schools should adopt cooperative strategies to help students to carry out learning activities in an all-round way. We all know that the cultivation of learning ability is not accomplished overnight, which is a process that needs long-term accumulation. After this process, students' learning and teaching effect will be greatly improved, thus laying a solid foundation for students' future development.

1. Introduction

In teaching, learning teaching is a must for every student. Although it is necessary to learn the content, but many students learning ability is still very poor, each language test paper learning ability problems are students lost the most place, which needs to arouse the attention of teachers and parents, in the study of students, not only need to rely on the guidance of teachers, but also need to rely on the supervision of parents in the day [1]. At present the overall level of teaching and learning is generally low, so what is the root cause? There are several reasons: poor learning style, low quality of learning content, low interest in learning, too little learning and poor learning environment. In order to change this present situation, the teaching teacher should use the "home-school cooperation mode" jointly with the parents to solve this problem, to change the students' learning style, improve the students' learning content quality, cultivate the students' interest in learning, increase the students' learning quantity and improve the students' learning environment, so as to promote the students' all-round development. The following contents are specific measures to improve students' learning level, hoping to bring a little help to Chinese teaching.

2. The Way of Cooperation between Schools and Enterprises

2.1. Develop Students' Study Habits and Promote Their All-round Development

Good study habits can effectively improve students' learning ability. In the study, good habits have to take notes, write a sense of reading, do excerpts and other ways. A Chinese teacher can ask students to hand in any book notes and post-reading notes every week [2]. In the normal teaching of Chinese textbooks, students can also extract some beautiful and moving sentences or paragraphs, and every Friday the Chinese teacher carries on the corresponding inspection, through this way, can help students to cultivate excellent study habits, which is also helpful to their future work.

2.2. Do a Good Job of Publicity for Parents and Change Their Educational Philosophy

As we all know, parents are the first teachers of children, in the process of children's growth is not without parents' company and education. From toddlers to later adults, in the process, parents are participants in the whole process, so it also means that parents should not only take care of the usual children's food, clothing, housing and transportation, but also bear the children's education problems. However, in the traditional concept of our country, most parents think that sending their

children to the best school is to provide the best educational environment for their children, and there are teachers in the school to educate their children, so they do not have to interfere too much in this respect, but this wrong idea makes them miss their children's education. In fact, the teacher only plays an auxiliary role in the process of children's learning, the same is true of parents, no matter which party should fulfill their greatest responsibilities and obligations, shouldering the child's education problems [3]. Therefore, if we want to bring into play the effectiveness of the home-school cooperation model, we must fundamentally change the traditional ideas of parents, to make parents realize that their children's growth education is also very important. When students are usually at home, parents can actively cooperate with their teachers in their study and teaching work. Chinese teachers in the class can invite students to participate with their parents through the selection of activities such as "Shuxiang Family" and "Parent-Child Learning Club ", distribute to parents the " Student Learning Program "proposal, do a good job in the publicity of learning education for parents, and urge parents to actively cooperate with the school's study and education work.

2.3. Provide Guidance to Parents and Create a Good Learning Atmosphere

In the student's study work, the study atmosphere is also very important, the good study atmosphere can make the student concentrate on the study, the poor study atmosphere can only make the student mood impetuous, can not concentrate. In general, that is, good learning atmosphere is a direct impact on whether students can concentrate on learning. In school, Chinese teachers can provide students with a good learning atmosphere by playing multimedia, because students generally like vivid pictures and videos, and in this way arouse students' interest in learning. At home, the Chinese teacher can guide parents to arrange a study for their students to create a quiet and comfortable learning environment [4]. Teachers can also guide parents to purchase useful learning books for their students to improve the quality of their learning content. Under certain conditions, Chinese teachers can organize parents in the class to carry out "learning and communication activities" together, so as to provide a good learning atmosphere for students.

2.4. Innovating Teaching Methods and Changing Teachers' Teaching Concepts

Changing teachers' concept is a very important link in educational reform. Teachers' teaching methods should be innovated constantly. In the normal teaching process, we should pay attention to the cultivation of students' subjective initiative, set a good example and model for students, and use people-oriented ideas to cultivate students' learning ideas [5]. Teachers should make it clear that in the teaching of higher vocational colleges, we should mainly train skilled talents for the society, which will improve students' professional ability and practical ability and follow the employment-oriented mode, so that students can fully play their professional skills in the future work.

2.5. Practical Development of Professional and Skilled Personnel

In addition to teaching professional skill knowledge, higher professional colleges should teach students the necessary skills when they are engaged in professional work. Therefore, higher vocational colleges should break the basis of curriculum chain as the core, carry out relevant teaching research according to our professional standards, pay attention to the training of teaching skills, and reform and innovate the professional courses taught, and strengthen the cultivation of students' professional skills. At the same time, the educational curriculum of higher vocational colleges should start from the actual situation and add practical training courses for professional talents, so as to ensure the organic combination of theoretical knowledge and practical methods.

2.6. Creation of Specialized Courses for Social Needs

According to the needs of society to establish a professional curriculum based on social needs of talents, combined with the specific situation of professional colleges and universities to establish a professional curriculum structure. The types of talents trained in higher vocational colleges are technical talents which integrate production, management and service. Teachers should follow this principle and design the relevant teaching methods of professional courses. It is necessary for colleges and universities to carry out corresponding market research to analyze the types of talents needed for market demand and the number of jobs needed. At the same time, according to the results of market research resources, the development of a new type of major lacking in the market, for the market has appeared saturation state of the professional adjustment and transformation, so as to promote higher vocational colleges professional course teaching can match the current talent market demand.

Figure 3 Higher vocational colleges

2.7. Development of a Teaching Philosophy Based on the Talents Needed by Society

Each student should have his own interests and special skills, so higher vocational colleges can set up corresponding teaching contents according to the students' own interests and interests and development needs, combine with the actual situation of the students, carry out differentiated training courses, combine the concept of student-centered and teacher-led training service, so that each student can become the talents needed by the society after entering the society. When students enter higher vocational colleges, teachers should understand students' needs for future development

through questionnaire survey, combine the teaching idea of relevant employment as the guiding direction, and add some teaching platforms of students' employment guidance direction, and create corresponding courses through this way, so as to do a classified teaching for students. But it can help students master professional skills knowledge, but also can provide students with a good learning opportunities and development platform.

2.8. Strengthen the Cooperative Relationship between Higher Vocational Colleges and Enterprises to Enhance Students' Learning Efficiency

Colleges and universities should combine the needs of enterprise talent type, strengthen the connection with enterprises, create the same curriculum, improve the teaching level, make the educational content closer to the needs of enterprises, and be able to help students find suitable jobs and promote the economic development of enterprises. In this process, students should be more exposed to corporate culture, understand the operation mechanism of the enterprise and the actual job position, so that students can have the opportunity to experience the business process. The advantage of this is that it can facilitate students to understand the structure of enterprise employees and the demand for professional talents, and at the same time, it can also promote the combination of teachers' teaching content and students' development direction, which can not only broaden students' horizons, but also enhance students' learning efficiency, and then accelerate students' training and teaching reform, and strengthen cooperation between schools and enterprises. Strive to make higher vocational college education students are able to "learn success".

3. Conclusion

To sum up, in teaching and learning, the education of teachers and parents is very important for students. Through cultivating students' interest in learning to promote the all-round development of students; to do a good job of propaganda and education for parents to change the traditional educational concept of parents; to do a good job of guidance for parents, to create a good learning atmosphere for students, these are able to effectively bring into play the effectiveness of the "home-school cooperation model".
