**Keywords:** University Teaching Quality Engineering Archives; Improved Teaching Quality; Establishment

**Abstract:** Teaching quality has always been an important target for construction and improvement in college education. At the same time, teaching quality is also an important indicator of the social influence of colleges and universities. Therefore, it is very important to establish effective engineering teaching quality archives. This type of archive plays an important role in the improvement of teaching quality, and its impact is crucial. A series of measures related to the establishment, development and utilization of relevant archives have played an important role in promoting the improvement of teaching quality in colleges and universities. Therefore, in order to continuously improve the quality of teaching in colleges and universities, it is necessary to pay attention to the establishment, development and utilization of such archives. At the same time, the establishment and use of such archives is also the mainstream trend of today's major universities. This paper makes a simple analysis and discussion on the establishment of college teaching quality engineering archives to promote the improvement of college teaching quality.

## 1. Introduction

The influence of the quality of teaching in colleges and universities on society is very important. As a new era of colleges and universities, the talents they cultivate are designed to further adapt to today's society. Only by adapting to today's society can we further use what we have learned to serve the society. In the face of this series of requirements, it is very important to continuously improve the quality of teaching in colleges and universities. With the recent years, the quality of teaching in major universities has gradually been paid attention to by the public, and the establishment of relevant teaching quality files has begun to attract people's attention. Various specialties have been launched between the Ministry of Education and major universities. In this process, a series of colleges and universities have proposed specialties, special courses, model courses, and teaching teachers. It is very important to collect these high-quality teaching resources. Further, the collected archives and teaching resources are served in the actual teaching, thereby promoting the improvement of teaching quality and becoming a necessity of the times.

## 2. Analysis of the Practical Significance of the Establishment of College Teaching Quality Engineering Archives

The word file is no stranger to people. In the process of actual work, the role of the file is also very important. In general, all useful information and related information are collected, formed into files, and further preserved and utilized. Teaching quality engineering generally includes six aspects, namely, professional structural adjustment and professional certification, teaching material construction and resource sharing, reform of teaching personnel training mode, university teacher team building, teaching status data release, and counterpart support to universities in western regions [1]. This kind of teaching quality engineering has great significance and has a very positive effect on the improvement of teaching quality. It is jointly issued by the Ministry of Education and the Ministry of Finance of China. There is also a great need for documenting work. On the one hand, because the teaching resources and teaching files involved are very large, it is convenient to manage on the one hand, and it is also convenient to collect and consult on the other hand. In particular, in

recent years, the overall reform of colleges and universities has focused on the reform of teaching quality. The teaching materials, teaching resources, and reforms involved are very large. Relevant materials need reasonable management, rational use, and repeated inspections. Whether it is the university's own teaching reform or the reform of teaching quality engineering, this type of file is extremely needed. On the other hand, the archives have strong repeatability, and the collected archives are often important content that needs to be reviewed repeatedly. With the establishment of such archives, it is possible to further use the archives for demonstration and play a role in the demonstration and influence of the archives. Because education is a long process, this kind of project also has a long process of improvement and change. It is extremely important to establish corresponding files. The related key content can play a demonstration role on the one hand, and can also be used to repeatedly observe to improve the teaching development and professional growth of the professional. This kind of project often involves a large amount of teaching resources, which has a very positive impact on the establishment and demonstration of new projects, and has a very important influence on the growth of professional teaching of college teachers. After a long collection of teaching experience, we can further improve the professional ability of teachers and enrich the construction of college teachers. For the young teachers and new members of the teacher team, they have a very positive influence and demonstration role, which further accelerates the construction and improvement of the teacher team and further enhances the teaching quality of the university.

In addition, such file establishment has a certain degree of influence on student learning. Students can learn through this type of file and enrich the students' learning resources. Based on the Internet, these files have stronger sharing and repeatability. Understanding, viewing and learning through the Internet can further enable students to learn the knowledge points that the teachers did not talk about in the classroom [2]. On the one hand, it improves the quality of students' learning, and on the other hand, it also plays a role in teaching and learning. Students can access the archives and feedback questions can also be updated and constructed by relevant professional teachers. The extremely important materials and archives for the improvement of the quality of teaching in colleges and universities often have a strong and extensive nature. How to organize a large amount of data and how to establish corresponding files has become a new problem. Only by properly sorting out the files can we further use the corresponding files to improve the actual quality of teaching. The establishment, organization and utilization of such archives have also become a new problem in the improvement of the quality of teaching in universities today.

### **3. The Analysis of the Specific Strategy of the Establishment of Teaching Quality Engineering Archives**

Every work is carried out in a corresponding scope and scope of development. The establishment of such files is also the same. First, it is necessary to clarify the scope of file classification and establishment. The relevant scope can be analyzed according to the characteristics of this type of work, and the key aspects of the work are actually analyzed and further classified and summarized. The special construction of related majors can establish a file. In general, the inductive materials should include the construction of specialties, the construction of relevant professional content and the construction of teachers. In short, this type of construction is to further summarize the content related to the profession and conduct actual induction according to the profession. Especially nowadays, colleges and universities often have their own specialties. The construction of featured professional files generally includes relevant professional materials and professional teacher team building materials. On the other hand, special courses and special textbooks can be archived and established, generally including various excellent courses, curriculum reform, bilingual teaching, planning teaching materials construction, special textbook construction, and online education curriculum construction [3]. This category generally contains a wide range of content, mainly in a variety of specialty courses, especially some of the more characteristic courses, after the establishment of the archives can further demonstrate and improve the class, thereby enhancing the class Repeated utilization and impact of the course. On the one hand, this kind of archiving can

promote the improvement of the teaching of the curriculum on the other hand, it can also promote the construction of the teacher team.

In addition to the above two items for archiving and establishment, relevant practical teaching and personnel training model reforms also need to continuously learn from experience, and related documents are also very important. Generally speaking, this type of document should include the innovation of teaching mode and talent training mode, the construction of experimental teaching demonstration center, and the construction of innovative experimental ten-point colleges. These materials are extremely important for the promotion and application of new models. In the process of reform and innovation, every measure and result needs to be effectively recorded, and problems are constantly observed and repeated, so as to continuously improve and innovate. Therefore, the establishment and induction of such archives is also conducive to the improvement of the quality of teaching in colleges and universities. The improvement of teaching quality and the innovation of teaching mode also need to be traced, and it is necessary to constantly reflect and review. However, the improvement of teaching quality is inseparable from the corresponding teacher team, so the construction of the teacher team is also very important. The construction of the teacher team should generally include the construction of the teacher team, an overview of the overall situation, and the establishment of the teacher's profile. This kind of documenting work is very important, and it has a very important support and influence on the improvement of teaching quality.

The corresponding documentation and archiving work needs to be further carried out according to the filing and archiving scope mentioned above, especially for the implementation of such work, which requires continuous use of the Internet [4]. The establishment of the file will directly affect the later use, so the file must be clear and clear, and the archiving method should be different from the traditional archiving method. The relevant paper files need to be double-filed to avoid loss or incompleteness of the files, and should be kept strictly. For the borrowing of files, etc., strict and accurate management must be carried out to further improve the effectiveness of file establishment and management. Make sure that this type of file is for the quality of teaching and is to improve the quality of teaching. Its integrity and effectiveness have a significant impact on the quality of teaching.

#### **4. The Use of Teaching Quality Engineering Archives Strategy Analysis**

The establishment and induction of archives is for the convenience of use and convenient use. Therefore, how to make practical use of such content in the later period is also one of the important contents in the work of this kind of archives. As far as the actual situation is concerned, this kind of archives has strong practical application. Only when the corresponding archives are effectively established, summarized and utilized, can they further play their real role, thus promoting the improvement of teaching quality in colleges and universities. When these files are effectively established and summarized, they can be further effectively utilized and thus play an essential role. In terms of corresponding propaganda work, through the school network or brochures and other means, the corresponding excellent teaching cases and teaching methods of the archives content can be publicized, or a series of publicity can be carried out according to the corresponding quality courses and teacher teams. The advanced teaching techniques and teaching methods that have been utilized are excerpted and publicized to further enhance the comprehensive teaching ability and social influence of colleges and universities.

Quality teaching archives need to be used, especially the public is familiar with the teaching methods and teaching models [5]. On the one hand, it is necessary to strengthen its specialization. On the other hand, it needs to be continuously strengthened in the perspective of moral education. The publication of this kind of high-quality teaching archives is to create a greater impact. It is also to bring the archive content into the society and into the student life, rather than only in the archives. On the other hand, through the publication and dissemination of such high-quality teaching archives, the society can improve the teaching cognition of such majors and such institutions, and enhance the professional pride and professional mission of teachers and students, thereby promoting the professional growth of teachers. In particular, this type of archive can be used for the construction

and publicity of school spirit, teacher morality, etc., thus playing a leading role in the profession. Establish a campus culture, a teacher's morality, promote students' understanding of the school and the profession, and promote the growth and construction of the teacher team.

In the context of today's big data era, people's production and life have been changed. People's understanding of the world is no longer known only in the form of books and newspapers. It is very important to actively use the Internet to open corresponding thematic websites. It has a very positive and positive impact on the exchange of the Internet and the use of related files. The use of such websites also makes the files have strong repeatability, which is convenient for the society to understand the school. While understanding the profession, it is also convenient for the campus teachers and students to repeatedly view and utilize such files. Promote the improvement of relevant construction, and enhance the actual utilization rate, utilization quality and utilization effect of such archives [6]. The actual development of this kind of work is in line with the characteristics of the times, and it is also in line with the trend of the times, and needs to be constantly valued.

## 5. Conclusion

In summary, the management of college teaching quality engineering archives is very important, and has a significant impact on the improvement of teaching quality. Therefore, the management and use of such archives can effectively improve the quality of teaching and related social influence. Active and effective implementation of corresponding work is very important for the improvement of the quality of college education.
