Keywords: Patriotism Education, Educational Value, Subjective Return

Abstract: With the rapid development of science and technology, China has become the largest socialist country in the world. The history and culture of the Chinese nation for five thousand years is not only the treasure of our country, but also the spiritual inheritance of our nation. Among them, patriotism is the driving force to support our country from backwardness to prosperity and strength. Therefore, at present, our country is in. Under the guidance of the socialist road, we should vigorously develop the economy, strive to build a prosperous, strong, democratic, civilized socialist modern country, and under the new historical conditions, we should inherit and carry forward the patriotic tradition. Patriotism education is an important ideological and political education, and this paper is to analyze the subjective return of the educational value of patriotism education base.

1. Introduction

Have a strong patriotism is the basis for the development and strong development of every country. Patriotism is also an important medium to stimulate people's patriotic emotion and carry forward the national spirit, and it is also an important course of ideological and political education for college students. In order to make every citizen feel the patriotism inherited by the country, our country has established a patriotism education base. Patriotism education base is a place to record the long history of the Chinese nation and reflect the great achievements of the Chinese Communists and the fruitful achievements of the socialist modernization drive. For example: martyrs mausoleum, museums, memorials, and other places for people to visit and study. However, with the continuous improvement of material life, people gradually forget the humiliation of the past and ignore the patriotic spirit. Therefore, to open up a way to guide patriotism education back to the standard has become an important mission of the construction of patriotism education base in our country.

2. The Value of Patriotism Education Base

2.1 The Value Status of Patriotism Education Base

First of all, patriotism education base has important historical value. In the base of patriotism education, history is its core, and the history of a nation is not only a song. Traveling to the landscape, people can not only think deeply about patriotism in these places, but also promote the economic development of the region. Finally, the most important value is the educational value. With the continuous development of the times, patriotism education base will be given different connotations, but no matter how the times change, it represents the precious spiritual heritage and glorious revolutionary tradition of the Chinese nation. At the same time, patriotism education base is also an important carrier of ideological and political education for college students.

2.2 Analysis of the Value Reduction of Patriotism Education Base

The purpose of the construction of patriotism education base is to make future generations remember history and stimulate patriotic spirit. However, due to the continuous improvement of the quality of life of the people after the reform and opening up, the nature of the construction of patriotism education base has been gradually ignored. People gradually focus on tourism, photography, consumption, and forget to reflect on learning. As the main object of education, most of the students are from the school. Organize teachers to lead to various patriotic education bases to

visit and study. In fact, this approach is not efficient, and such activities tend to focus more on form than on its nature. And the students' ability to understand is limited. This further reduces the efficiency of education. At present, there is a common phenomenon is the continuous emergence of the tertiary industry, patriotism education base is sacred and inviolable, but excessive commercial atmosphere will make the economic value more important than the educational value. Among them: One of the important reasons for the decline of the value of patriotism education base is the funding problem. It is reported that due to insufficient funds, a patriotism education base in Beijing is lack of adequate maintenance in the pipe, and cultural relics are also lack of proper maintenance. I think the most important economic problem is the lack of innovation in patriotism education base, if you do not know how to keep pace with the times, you can only be forgotten. However, the lack of attraction of patriotism education base gradually loses its educational value. The backwardness of educational concept is also an important reason that leads to the decline of the value of patriotism education base. With the development of science and technology, educational means are also constantly innovating and developing. Therefore, the educational method of patriotism education base should also keep pace with the times, and should not only be an exhibition of cultural relics, but should be brought to the visitors at a deeper level. For example, combined with advanced technology to make visitors feel war, with a deeper experience of patriotism. The main object of patriotism education base is students, but cultivating students' patriotism will make little effect if they only visit the patriotism education base. Therefore, while cultivating patriotism, we also need the strong cooperation of the school, the school can hold more red classic activities, so that students into history, feel patriotic spirit.

2.3 The Way to Return the Value of Patriotism Education Base.

Patriotism education is an important way to carry forward the traditional culture of the Chinese nation and enhance national cohesion. The state strengthens the fund policy to support the patriotism education base as the public welfare culture position, its social benefit is far greater than the economic benefit. Therefore, the state should increase the financial support of patriotism education base, encourage patriotism education base to carry on innovation, break away from tradition, let visitors participate in various forms of patriotism education, and extricate themselves from boring preaching. For example, students can be organized to visit patriotic education bases and red tourist attractions, such as commemorating revolutionary martyrs, holding swearing-in ceremonies, and so on. But the need for government funding is far from enough for the development of patriotic education bases. Patriotism education base must have its own hematopoietic function. Red tourism, for example, will not only drive economic development, but also form a balance of value. To improve the quality of commentators and give full play to their role in visiting patriotic education bases, commentators play an important role. A good commentator will let visitors be present, the understanding of patriotism has achieved twice the result with half the effort, on the contrary, the quality of the commentator will make people feel boring, a great degree of educational efficiency. For every patriot. All the Yi education bases should build an efficient interpretation team. In order to build a professional team, it is necessary to enrich the knowledge background of commentators and establish scientific luck. Camp mechanism, to provide regular knowledge and skills training, in order to highlight the social education function of patriotism education base. Giving full play to the role of schools in patriotism education School is an important place for youth education, therefore, we should give full play to the role of the school and cultivate students' patriotism. The school can hold activities such as reading red classics aloud, watching red classics and so on, and let students feel after writing and reading, so that students have a strong interest in patriotism. Schools can also organize students to visit patriotism education bases, schools can use the introduction of background, create problems, and other links so that students can deeply understand the spirit of patriotism.

3. Conclusion

Lenin once said: "patriotism is one of the deepest feelings for his motherland that has been

consolidated for thousands of years.” With the continuous changes in the conditions and forms of patriotism education, we should also constantly innovate the forms, ways and channels of patriotism education. Patriotism, as an emotion and spirit, is abstract in essence, but it is indeed the spiritual force of people's progress. Deepening patriotism education, carrying forward patriotism spirit and cultivating people's noble moral sentiment are the pursuit of patriotism education base construction.
