Keywords: The spirit of the National Education Congress; The strategy of "one excellent; Two high" in Qinghai Province; Five persistence, cultivating personnel.

Abstract: Taking the spirit of the National Education Congress as the guiding ideology, and based on the construction of Qinghai College of Architectural Technology of 40 years' practice, this paper summarizes the results, analysis the difficulties, plan for the future development. In the future, it will devote itself to cultivating high-quality technical and skilled personnel for the strategy of "one excellent, two high" in Qinghai Province, and shoulder the important mission of the modernization process of Qinghai College of Architectural Technology.

1. Introduction

After the National Education Conference was held on September 10, 2018, Qinghai Province immediately set off a learning boom. I participated in the training and implementation of the National Education Conference spiritual theme training class, and systematically learned and understood the speech of General Secretary Xi Jinping at the National Education Conference. I truly realized from the ideological point that the National Education Conference is the Party Central Committee's socialism with Chinese characteristics. Entering a national education conference held in the new era reflects the great importance attached by the Party Central Committee with Comrade Xi Jinping as the core to education. General Secretary Xi summarized the laws governing the development of education reform in China with the "nine persistences", and made a comprehensive and in-depth study of the socialist builders and successors who adhered to the development path of socialist education with Chinese characteristics and cultivated the all-round development of moral, intellectual, artistic, and artistic development. The interpretation of the new era has pointed out the direction for the great practice of education reform and development in the new era.

In January 2019, the State Council issued the "National Vocational Education Reform Implementation Plan", from improving the national vocational education system, building the national standards of vocational education, promoting the integration of production and education, school-enterprise "dual-element" education, building a multi-school school pattern, and improving technology The technical personnel protection policy, strengthening the supervision and evaluation of the quality of vocational education, and the implementation of reform organization and implementation, and so on, 20 articles on the overall requirements, objectives and specific indicators of vocational education in the next 5-10 years, and clarified the vocational education The direction of future development. In March, Premier Li Keqiang made a government work report, re-emphasizing the strategic role of vocational education in stabilizing and expanding employment and solving the shortage of high-skilled talents. Mentioning reform and improvement of the examination methods for higher vocational colleges, this year's large-scale expansion of 1 million people; expanding the coverage of scholarships for higher vocational colleges, raising subsidy standards, and accelerating the exchange of academic credentials and vocational skills certificates; the central government has increased sharply The investment of vocational colleges and local finances should also strengthen support; support enterprises and social forces to set up vocational education, continue to implement special enrollment plans for rural and poverty-stricken areas, strengthen the construction of teachers

and teachers, and build education for the people's satisfaction. Let everyone have equal opportunities to change their own destiny through education, achieve life dreams and other content, develop a fairer and more quality education, and provide us with the goal of struggle and the driving force for progress.

Being in an underdeveloped area of education, the spirit of the National Education Conference, the National Vocational Education Reform Implementation Plan, and the 2019 government work report gave me a deep shock and encouragement, which made me feel the pride of being a professional educator. Pride also enhances my sense of responsibility and mission to the modernization of higher vocational education, which makes me further ponder the reform and development path of the college education.

2. Review of the achievements in the development of education in Qinghai

According to statistics from the Ministry of Education and Max, as of 2017, there are 2,631 general higher education institutions in the country, including 1388 higher vocational colleges, accounting for 52.76%, and 25,535,869 ordinary undergraduate students. The number of college students in the school is 11,049,549, accounting for 40.13%. The status and value of higher vocational education in higher education in our province is also becoming more and more important. There are 12 colleges and universities in Qinghai Province, among which 8 are high vocational (specialty) colleges, accounting for 66.67%; the number of students in ordinary colleges and universities is 66,974. Among them, the number of students in vocational colleges (specialties) is 29,472, accounting for 44.01%; among them, Qinghai Institute of Architecture and Technology (specialty) has 4,896 students, accounting for 16.6% of the students in Qinghai Province.

In the past 40 years of reform and opening up, our province's higher vocational education has achieved a series of achievements, providing important intellectual support and talent guarantee for the social development and regional economic transformation and upgrading of Qinghai Province. Qinghai Jianyuan is the main force of higher vocational colleges in our province. With the rapid development of related majors such as cloud computing, internet of things, green energy-saving buildings and underground integrated pipe corridors, the ability to support emerging industries has been significantly enhanced, injecting new impetus into the construction communication industry. Based on Qinghai, we will cultivate talents in Qinghai, accurately connect poverty alleviation students, and expand the poverty alleviation plan from 10% to 20%. In 2018, the general higher vocational (specialist) actually accepted 1,645 people, and admitted 1539 students from the province, accounting for 93.6% of the total number of students. The number of rural students was 1,274, accounting for 77.4% of the total number of students. The source of students in Qinghai-based farming and pastoral areas became the main source of students; 2018 Ordinary higher vocational (specialist) graduates achieved employment of 1,316 people, and the initial employment rate reached 99.10%, which rounded out the university dream of children in the farming and pastoral areas of our province and provided a new force for the industry. At the same time, the service of poverty-stricken colleges and universities in our province has shown a new trend, forming a characteristic model of "professional support + industrial poverty alleviation", and building a vocational education force to block the intergenerational transmission of poverty.

In the course of more than 40 years of schooling, the college has been adhering to the spirit of "strong academic strength, strong morality and solid foundation", facing the construction and communication industry of the province, and has not forgotten the initial heart and the future. Innovate work ideas, deepen institutional and institutional reforms, increase connotation construction, promote effective integration of education and teaching with industrial enterprises, strengthen students' ability to innovate and innovate, deepen the construction of teaching staff, standardize student education management, strengthen enrollment and employment, and improve internal governance. And the improvement of social service functions and other aspects have achieved good results, the influence of vocational education has been continuously enhanced, and the rapid development of the development goals of the national high-quality colleges and higher vocational colleges. The college has trained more than 40,000 high-quality technical and technical professionals

and management talents for the economic and social development of our province, and trained more than 90,000 professional and technical personnel. In December 2018, the college won the 6th Huang Yanpei Vocational Education Award for Outstanding School Award.

3. Deep thoughts on the development of education in Qinghai

Faced with the new situation and new goals, as a higher vocational education worker in Qinghai Province, I also further thought that the campus area and the average living area of the college are insufficient, and more than 4,800 full-time students are crowded on the 141-acre campus. The teaching area, living area and residential area are intertwined, and the teaching order and campus security and stability are facing new challenges. The comprehensive quality of teachers, the quality of dual-teachers, the proportion of full-time teachers, and the value of teaching and research equipment per student are weak. People and professional construction are facing new challenges; with the continuous development of emerging industries, the transformation and integration of traditional college majors and the training objectives, specifications and resources of emerging professions face new challenges. At the same time, the deep integration of school-enterprise cooperation is more difficult. The introduction of professional and technical talents with high-tech titles in experienced industry enterprises and the introduction of resources from high-quality enterprises and research institutes face new challenges, which restrict the overall improvement of the college and the ability to serve local economic and social development.

4. Planning for the development of higher vocational education in Qinghai Institute of Construction

General Secretary Xi put forward new and higher requirements for vocational education, emphasizing the importance attached to vocational education, vigorously promoting the integration of production and education, and improving the educational mechanism of combining morality with skills and engineering, and cultivating hundreds of millions of industries for all walks of life. High-quality industry is a force. Emphasis is placed on the introduction of flexible and effective preferential policies to promote the formation of a community of destiny between vocational colleges and industry enterprises. To this end, Qinghai Construction Institute has formulated and implemented the "9731" program ("9 persistences" to lead, implement 7 tasks, promote the realization of 3 transformations, deepen one education mechanism), and study and implement the spirit of the National Education Conference as the primary task of the college. .

4.1 Implement the education priority development strategy

Planning first, in accordance with the spirit of the National Education Conference and Education Work Conference, the spirit of the construction work conference and the government work report on the development of vocational education, the Ministry of Education "National Vocational Education Reform Implementation Plan" and other spirits, and actively promote the implementation of the Academy's quality improvement Development Action Plan (2018-2022) and the construction process of the new campus, closely follow the high-level vocational colleges and professional construction plans with Chinese characteristics, optimize professional layout, enhance innovation ability, strengthen team building, promote connotative development, and integrate production and education, school-enterprise cooperation, and vigorously improve the level of education and quality of personnel training.

4.2 Implement the new era of Lide Shuren project

In accordance with the new requirements of the state for all levels of schools in the new era and the new stage of "cultivating socialist qualified successors", we will continue to deepen the "3211" education work, and carry out "thinking work seminars" in stages and modules. "Ideology Symposium", "Great Craftsmen Entering the Campus", "Lao Mou into the Campus", "Excellent Vocational School Students Sharing Campus", "Quality Classroom", "Classic Reading" and other

activities to effectively strengthen sports, aesthetic education, and labor education. In the determination of ideals and convictions, patriotism, strengthening moral cultivation, increasing knowledge and knowledge, fostering the spirit of struggle, and strengthening the overall quality.

4.3 Strengthen the construction of the teaching team in the new era

Based on the "tutor system", the "358 young and middle-aged teachers' talent training project", the "old-fashioned new project" and the "part-time teacher construction project" three upgrading projects will be further implemented. The college teachers will be at least one month in the enterprise or real Training base training, implementation of the teacher's five-year cycle of full-volume training system, continue to strengthen the practice of teachers' enterprise, and take measures to build a high-level faculty that meets the needs of the college's construction goals.

4.4 Actively respond to educational concerns

Focus on the combination of poverty alleviation, support and wisdom, and formulate a plan for accurate poverty alleviation; complete the innovative development action plan, national high-quality verification and collection work, and continue to promote the construction of language and language standards schools.

4.5 Deepen comprehensive reforms in the field of education

Standardization construction is the breakthrough point for the development of vocational education in the college, vigorously develop the "new engineering", optimize the professional layout and construction of the college, complete the work of the institution's internal organizational responsibility revision, personnel adjustment, etc.; establish a target system to promote the diagnosis and improvement of education and teaching; The enrollment plan corresponds to the national higher-level enrollment expansion, single-investment single-instance to carry out institutional reforms; carry out relevant professional international exchanges and cooperation in running schools; start smart campus construction, accelerate the digital campus process of the college; explore and practice the promotion of property management and 1+X certificate system.

4.6 Improve the ability of service economy and social development

Collaborative enterprises and research institutes jointly carry out comprehensive and in-depth cooperation between schools and enterprises in the aspects of assembly, masters of rivers and rivers, building energy conservation, and scientific and technological services for local economic development; continuously develop a library of continuing education experts and academic lectures (reports) to cultivate and continue education. Independent brands and featured projects; equal emphasis on education and training, integration of military and civilian development, and joint education and training; around the advanced manufacturing, modern service industry, and strategic emerging industries, the college will promote vocational training in areas such as elevator technical skills and talent shortages. .

4.7 Continuously strengthen party leadership and construction

We will comprehensively implement the party strictly, improve political positions, adhere to the "two maintenance" and "four consciousnesses", continue to implement the two "subject responsibilities", give full play to the party's overall leadership over the work of the college, and further standardize party politics. Life, strengthen education mechanisms, do a good job in grassroots party building, etc.; adhere to the fundamental tasks of Lide Shuren, carry out the "four loves and three have" theme education activities in depth; continue to strengthen national unity education and campus spiritual civilization construction.

Faced with a great opportunity for the development of national vocational education, our higher vocational education personnel will always take the guidance of socialism with Chinese characteristics as the guide, and closely follow the strategic plan of Qinghai Province's "May 4th Strategy" and "One Superior and Two High" and adhere to the party's Leading, adhering to the virtues of the people, persisting in reform and innovation, persisting in serving the society, persisting in

highlighting the characteristics, planning the development goals and implementation paths of the college, and being the communicator and practitioner of the spirit of the national and provincial education conferences, shouldering the high education in Qinghai. The important mission of the modernization process is to make the responsibility and responsibility of our professional people for the construction of a prosperous civilization, a harmonious and beautiful new Qinghai, and a Chinese dream of realizing the great rejuvenation of the nation!
