Keywords: Vocational colleges, Characteristic collection, Structure model

Abstract: Under the background of the “new era”, a large number of Independent Colleges in China have been transformed into vocational colleges. As one of the 31 national vocational education colleges and universities, Jingdezhen Vocational University of Art actively responds to the national call, especially in the construction of library collection resources, tries to ensure vocational education and integrate its own “ceramic art” characteristics, and actively explores the library collection characteristic literature library in line with the characteristics of our university.

1. Introduction

As one of the main guarantees of teaching and scientific research, the library resources of vocational undergraduate university need to meet the characteristic requirements of vocational education. They not only need to cover ordinary paper books, but also need to actively expand new resources in line with the characteristics of vocational education.

2. Research Contents

2.1 Current Situation

Since the 18th CPC National Congress, General Secretary Xi Jinping has personally planned and promoted vocational education, inspected and investigated vocational schools for many times, and made a series of important instructions on vocational education. The state has made it clear that vocational education and general education are two different types of education with equal importance. At the same time, the pilot of “1 + X” (“academic certificate + several vocational skill level certificates) system has been started.

In April, the national vocational education conference was held in Beijing. Vice Premier Sun Chunlan attended the conference and made an important speech: “We should deeply implement the important instructions of General Secretary Xi Jinping on vocational education, implement the requirements of Premier Li Keqiang’s instructions, adhere to morality, cultivate people, optimize type positioning, and accelerate the construction of a modern vocational education system.” In September, the national development and Reform Commission and the Ministry of culture and tourism officially announced the implementation plan of Jingdezhen national ceramic culture inheritance and innovation pilot zone.

2.2 The Research and Construction of Characteristic Collection Structure Model

2.2.1 Collection Resources “Can Grow”

Vocational education puts forward high requirements for practical ability in talent training. Therefore, the library collection resources should not be static, but need to change with the continuous development of vocational education.

Our university tries to lead students into enterprises, deeply study the specific needs and development trends of the industry and market for talents, analyze and assist in formulating new industry standards, dynamic adjustment and sustainable growth. These industry standards not only greatly enrich the library collection, but also perfectly meet the characteristics of “can grow”.

2.2.2 Collection Resources “Can Be Heard”

At the same time, the university can invite well-known entrepreneurs, intangible cultural heritage inheritors, craftsmen and other people into the University and set up a “famous lecture hall”.

Let entrepreneurs enter the campus and share the development prospect of the industry and the secret of enterprise success; Let the inheritors of intangible cultural heritage enter the campus and share the cultural treasure house inherited from the country's long history; Let artisans enter the campus, share the craftsman spirit and continue to write the ultimate craftsmanship. After that, the contents of these speeches were systematically sorted and published into a volume, which became an “audible” library collection resource.

The hard entrepreneurial experience of entrepreneurs, the inheritance and innovation of intangible cultural heritage inheritors to traditional art, and the unremitting persistence of artisans to pure handmade will encourage college students to study hard with them as an example. At the same time, the library collects these exciting speeches into a volume, which can also become a unique characteristic collection resource.

2.2.3 Collection Resources “Can Be Visualized”

Deepen cooperation with international art organizations and jump out of the previous fixed thinking. In 2022, the university will cooperate with the Rome Film Academy to establish Jingdezhen branch. Through this cooperation, the library will try to use VR technology to build a “film and record” resource library to enrich the collection resources in the form of “visualization” from another dimension. The introduction of VR technology can make the library “lively” and attract more students into the library. At the same time, it can also get rid of people's fixed thought of “cold” paper documents.

2.3 Research Meaning

2.3.1 Serve the Major National Strategies

In the new era, vocational education has risen to the status of national strategy. Constantly emphasizing the status and importance of vocational education is a positive guiding signal released by the state to the development of education. Starting from the library collection, the establishment of a complete vocational education university library is one of the favorable measures to respond to the national call and help the rapid development of the University.

2.3.2 Boost Local Economic Development

As the Millennium porcelain capital, Jingdezhen has a long cultural history and huge industrial foundation. With the continuous advancement of social development, the traditional handicrafts began to disappear gradually. As the only vocational undergraduate university in Jingdezhen, it shoulders the important task of revitalizing the local economy and inheriting culture. Collect and sort out the speeches of entrepreneurs, inheritors of intangible cultural heritage and artisans. While enriching the collection resources, it can also encourage college students to study hard, and finally help the development of traditional ceramic industry in the region.

2.3.3 Constructing Modern Vocational Education System

Vocational education undergraduate colleges and universities take talent training, scientific research, social service, cultural inheritance and innovation, and international cooperation and exchange as their basic functions. Therefore, the collection construction of undergraduate vocational education university library can not copy ordinary universities, but should highlight the “characteristics” and explore the “1 + X” collection in line with its own characteristics, which will eventually become an important part and beneficial supplement of the modern vocational education system.

3. Conclusion

Collection resources “can grow”“can be heard” and “can be visualized”, these are a tentative exploration of the library of Jingdezhen Vocational University of Art in the construction of collection resources and a useful supplement to the construction and improvement of vocational education system. In the process of practice, the university will also conduct diversified research on library collection resources according to the characteristics of national strategy, local economy and vocational education, with the goal of building a relatively perfect library collection system.
